Shale Gas Community Groups in New Brunswick Express Concern

New Brunswick - The Citizens for Responsible Resource Development's (CRRD) media conference announcing support for the continued development of the shale gas industry in New Brunswick does not express nor represent the views of many of the community based groups that have been formed to address the issues of this relatively new and highly controversial industry in our Province.

Many New Brunswicker's are still unaware and unfamiliar with this complex industry. We, the undersigned, are looking forward to continuing to work in our communities and with each other to educate and inform residents of the potential impacts of a shale gas industry in New Brunswick.
